

Listing of the Claims:

Please amend the claims as follows and replace all prior versions and listings of the claims in the application with the following listing of claims:

1. (Currently Amended) A pre-folded flower wrap comprising:
a folded sheet of material comprising a plurality of scored intersecting lines, the plurality of scored intersecting lines defining a distinct folding sequence when moving the sheet of material from an unfolded position to a folded position comprising a pre-determined folded shape, the folding sequence comprising a first fold that overlaps the sheet of material and subsequent folds that form the overlapped sheet of material into the corresponding to a pre-determined folded shape for the pre-folded flower wrap, ~~the pre-determined folded shape~~ comprising an overlapping portion, and a plurality of peaked sections and multiple layers that ~~provide~~ comprise an appearance of ~~the multiple overlapping layers sheet of material~~ having been wrapped by hand around a floral arrangement ~~when the sheet is in the folded position~~, wherein the pre-determined folded shape further comprises the functionality of is capable of being used like a flower sleeve to hold facilitate placement of the floral arrangement within the multiple layers without having to wrap the layers around the floral arrangement.
2. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material comprises a single layer.
3. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises visual indicia arranged to illustrate the folding sequence.
4. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises a fastening means disposed on the overlapping portion when the sheet of material is in the folded position to secure the pre-folded flower wrap in the pre-determined shape.
5. (Previously Presented) The pre-folded flower wrap of claim 4, wherein the fastening means comprises adhesive, double-sided tape, mechanical fasteners, direct bonds or

combinations thereof.

6. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the pre-determined shape is generally conical having an open top and bottom.
7. (Canceled)
8. (Canceled)
9. (Previously Presented) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises markings disposed across the sheet of material and arranged to produce a selected appearance when the sheet is in the folded position, wherein the markings are arranged to compliment the pre-determined shape of the pre-folded flower wrap.
10. (Previously Presented) The pre-folded flower wrap of claim 9, wherein the pre-determined shape comprises a generally conical shape and the markings are arranged to produce an appearance of a generally translucent inner wrap surrounded by a generally transparent outer wrap.
11. (Previously Amended) The pre-folded flower wrap of claim 1, wherein the sheet of material further comprises a plurality of folded positions, each one of the plurality of folded positions corresponding to a distinct pre-folded flower wrap, the plurality of scored intersecting lines defining a plurality of distinct folding sequences, each one of the distinct folding sequences associated with one of the folded positions and used when moving the sheet of material from the unfolded position to the desired folded position.
- 12-17. (Canceled)
18. (Currently Amended) A pre-folded flower wrap comprising:
a folded sheet of material comprising:

a plurality of scored intersecting lines, the plurality of intersecting lines defining a distinct folding sequence when moving the sheet of material from an unfolded position to a folded position; and markings disposed across the sheet of material and arranged to produce a selected appearance when the sheet is in the folded position, the markings producing translucent areas and transparent areas in the sheet of material; wherein the folding sequence overlaps the sheet of material and the markings to align the transparent areas and translucent areas to produce ~~corresponds to~~ a pre-determined folded shape comprising the appearance of a generally translucent inner wrap surrounded by a generally transparent outer wrap, wherein each wrap has an appearance of being been wrapped by hand when the sheet is in the folded position and the markings are arranged to compliment the pre-determined folded shaped by producing an appearance of a generally translucent inner wrap surrounded by a generally transparent outer wrap.

19. (Previously Presented) The pre-folded flower wrap of claim 10, wherein sheet of material comprises a single layer.
